-----

Utility EWS AG and developer MW Storage have completed the expansion of a battery energy storage system (BESS) project in Switzerland from 20MW to 28MW, making it the country's ...

So there you have it - Switzerland's energy storage landscape in 2025 isn't just about electrons in boxes. It's a wild ride of innovation where precision engineering meets environmental ...

The research and development of the gravity energy storage system have been based in Ticino and operational since 2019 with its R& D center. The commercial demonstration unit has been ...

Swissgrid sees battery storage as a key technology for the energy transition. It not only facilitates the integration of renewable energies, but also increases the flexibility of the entire ...

The Nant de Drance pumped-storage power plant, located in south-western Switzerland, is one of the most powerful in Europe. Commissioned in 2022 after 14 years of construction, it lies 600 ...

This framework aims to address seasonal electricity demand and generation discrepancies, promoting innovative storage solutions, supporting Power-to-X technologies, and ...

"This project helps to stabilize the electricity grid in Switzerland and to optimize the management of our own energy and power capacity in Wettingen."

With its hydroelectric power plants in the Alps and innovative projects, Switzerland is contributing to the search for solutions for the efficient, long-term storage of electricity.
