Is Syria's energy system in ruins?

Syria's energy system is in ruins. To rebuild energy security the country's new government faces two major challenges. The first, vital for Syria's swift recovery and political stability, is bringing reliable flows of electricity and fuel to its people.

Should Syria become an energy hub?

In the longer term, it should offer Syria a role in an interconnected Eastern Mediterranean energy hub with independent access to the EU market for gas and electricity. For more than a decade, Syrians have been coping with severe energy shortages. Years of war and division have crippled over 50% of the country's electricity grid.

Should the EU support energy generation in Syria?

In the short to medium term, it should support energy generation in Syria, especially in renewable electricity. In the longer term, it should offer Syria a role in an interconnected Eastern Mediterranean energy hub with independent access to the EU market for gas and electricity.

Why does Syria have a low electricity supply?

The war has seen a drop in electricity generation capacity from 8 500 Megawatts to just 3 500, primarily due to the destruction of key power plants including Mahardah, Aleppo and Zayzoun. The lack of reliable energy supplies is a major concern for Syrian citizens and its new government. Syria's oil and gas sector is in an even worse state.

Search all the latest and upcoming battery energy storage system (BESS) projects, bids, RFPs, ICBs, tenders, government contracts, and awards in Syria with our comprehensive online database.

In the short to medium term, it should support energy generation in Syria, especially in renewable electricity. In the longer term, it should offer Syria a role in an interconnected Eastern ...

In a significant step toward rebuilding its war-damaged infrastructure, Syria's transitional government has signed a landmark \$7 billion energy investment agreement aimed at revitalising the country's ...

On May 29, 2025, President Ahmad al-Sharaa witnessed the signing of a \$7 billion memorandum of understanding in Damascus, marking the largest post-war infrastructure investment ...

# Syria Industrial Park Energy Storage Project

This project consists of six battery energy storage systems that can collectively store 400 MWh of electricity, sufficient to supply power to 600,000 homes for two hours.

Well, there you have it - Syria's energy future isn't about choosing between survival and sustainability. With smart storage solutions, it can achieve both simultaneously.

In the heart of the Middle East, Syria is quietly making waves with its groundbreaking energy storage project - a \$120 million initiative aiming to stabilize the national grid while integrating solar farms ...

Sanctions lifted in June 2025 have allowed Syria to re-enter the global market, with the first crude shipment in 14 years. Major agreements include a \$7 billion (&#163;5.7 billion) power generation ...
