Researchers have developed a water-based battery that could make rooftop solar energy storage safer and more efficient for households.

The quick summary: Engineers have developed a new water-based flow battery that makes rooftop solar storage more affordable, efficient, and safer than conventional lithium-ion ...

Scientists have developed a high-current density water-based battery that can be suitable for residential use. The next-generation "flow battery" could help households store rooftop ...

Our new liquid battery for solar storage "finally makes organic flow batteries competitive. It opens the door to systems that are not only cheaper, but also safer and simpler to scale."

A new combination of materials developed by Stanford researchers may aid in developing a rechargeable battery able to store the large amounts of renewable power created through wind or ...

The development of this new flow battery marks a significant milestone in energy storage technology. Unlike conventional batteries, this high-current density, water-based battery is designed ...

One challenge in decarbonizing the power grid is developing a device that can store energy from intermittent clean energy sources such as solar and wind generators. Now, MIT researchers have ...

This next-generation "flow battery" paves the way for compact, high-performance energy systems suitable for households and is projected to cost far less than today's lithium-ion setups, ...
