In addition to its economic impact, tariffs on solar have caused 10.5 gigawatts (GW) of solar installations to be cancelled, enough to power 1.8 million homes and reduce 26 million metric ...

Competition in utility-scale solar project development and EPC takes place across a variety of factors, primarily cost, project quality, and time to completion.

Congress could provide policy guidance on trade issues and evaluate whether current trade policies are achieving their desired effects, including protecting U.S. interests, promoting U.S. solar PV ...

We surmised that three variables were particularly salient in determining replacement decisions: installation price, compensation rate (i.e., the going rate for solar energy sold to the grid),...

State and local governments can play a crucial role in facilitating access to solar energy through incentives, subsidies, and streamlined permitting processes. Without these supports, ...

installation jobs more than it increased solar manufacturing jobs. By contrast, a modest subsidy to domestic solar panel manufacturing - an industrial policy - could lead to on-shoring of solar panel ...

Tariffs increased domestic manufacturing jobs but led to five times the reduction in overall employment. Installation jobs have lower wages than manufacturing jobs, but their economic impact ...

This article offers a nuanced examination of the effects of solar tariffs, highlighting their challenges and exploring potential paths for industry growth. By adopting a bipartisan lens, we aim to foster ...
