-----

Utility-scale solar electricity-generation capacity rose from about 314 MW (314,000 kW) in 1990 to about 91,309 MW (about 91 million kW) at the end of 2023. About 98% was solar ...

Overview EEI maintains comprehensive statistical data on the electric power industry and investor-owned electric companies. Below are quick statistical highlights providing an overview of the industry.

Globally, spending on low-emissions power generation has almost doubled over the past five years, led by solar PV. Investment in solar, both utility-scale and rooftop, is expected to reach ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

The journey toward achieving 1 trillion watts of solar power represents both an ambitious target and a critical necessity in our fight against climate change. This vision illustrates enormous ...

The U.S. Inflation Reduction Act (IRA) will spur about \$3 trillion investment in renewable energy technology that could double the amount of energy produced by the shale revolution 15 years ...

Solar power surges past \$3.3 trillion! Explore the booming energy investment landscape and seize your chance to join the revolution.

Electricity generation from solar, measured in terawatt-hours.
