With China implementing major changes to its solar market design this year, a temporary dip in global growth in 2026 appears very likely. Meanwhile, other regions are falling behind, ...

Spending on low-emissions power generation has almost doubled over the past five years, led by solar PV. Investment in solar, both utility-scale and rooftop, is expected to reach USD 450 billion in 2025, ...

Energy generation from renewables continued its steady upward trend, as a result of increases in solar generation (and despite a drop in wind and hydro generation).

The above factor, along with the technological innovations aimed at the development of new methods in PV and Concentrated Solar Power (CSP) methods by prominent players, is ...

The corporations operating in this market are accountable for developing and erecting renewable energy infrastructure, including wind turbines, solar panels, hydroelectric dams, and biomass plants.

Unicorn Solar provides a brief overview of the upstream and downstream sectors of the PV industry, intending to highlight what happened in 2023 and the first half of 2024.

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

In this article, we will explore the U.S. power markets comprehensively, discussing upstream generation facilities, midstream transmission organizations, and downstream retail energy ...
