This project shall increase the electricity generation capacity of Uruguay, while reducing consumption of fossil fuels, and contribute to the reduction of greenhouse gazes from Uruguayan electrical network.

The Ministry of Industry, Energy and Mining (MIEM) in Uruguay has chosen the H24U project as the country's first venture to utilize green hydrogen as an energy source.

As global energy markets shift toward sustainability, Uruguay is emerging as a pioneer in large-scale energy storage solutions. This article breaks down why this project matters, how it aligns with global ...

Enter the Uruguay energy storage project, a game-changer in balancing the country's wind-heavy grid. Think of these storage systems as giant 'energy piggy banks' - they save excess power during windy ...

Uruguay built a power grid that runs 99% on renewables--at half the cost of fossil fuels. Here's how its bold energy overhaul became a global model.

Uruguay's electricity matrix reached 92% renewables even in the year with the lowest hydro contribution on record. The robustness of the National Interconnected System (SIN) has been increased through ...

While lithium-ion batteries grab headlines, Uruguay's pumped hydro storage projects are the quiet heroes. The 50MW Batlle project near Montevideo can power 30,000 homes for 8 hours - ...

Though there were efforts to attract private investment in the late 20th century, only limited participation has been realized. The country has also diversified its renewable energy portfolio, generating ...
