That just isn't going to happen. Even if you use a price of .50/watt for laminates from sunelec that still works out to approx \$5.50 per sqft (148watt panel 51x38 or 11watt per sqft). That is not counting ...

From the photos it doesn't look like you have enough slope to "shingle" the panels. If you don't want to use sealant then I would try to make it leak and add gutters horizontally between each ...

High-quality sealing tapes and adhesives are commonly used to waterproof the gaps between photovoltaic panels. These materials are designed to withstand extreme weather conditions ...

In the first part of this two-part article, I covered the roof membranes and roofing systems commonly used in commercial and industrial (C& I) buildings. Roof identification is important because ...

For rooftop waterproofers, rooftop panels create additional challenges, as the mechanical attachments, cables, pipes, and other penetrations need special attention. Recently though, several ...

In a waterproof solar panel roofing system, install solar panels directly on top of the roof to ensure full protection against water infiltration. In that case, no traditional canopy needs to be ...

Complete guide to installing solar panels on membrane roofs. Compare ballasted, mechanical, and bonded methods for EPDM, TPO, and PVC systems. Expert tips included.

When it comes to installing solar panels on a membrane covered roof there are different ways of getting the job done. This blog explores the pros & cons of different methods available.
