Ford Motor Co. has named a leader to its new business segment, Ford Energy, which will make battery energy storage systems in addition to making batteries for electric vehicles.

Ford is launching a new business -- including sales and service -- to capture the large demand for battery energy storage from data centers and infrastructure to support the electric grid.

The appointment, announced on 27 January, follows Ford's far-reaching December pivot away from pure electric vehicle production and towards what the company characterises as ...

Those storage systems, which will use cheaper lithium iron phosphate batteries, will be used to power data centers and help buffer demand on the electric grid. Ford says the battery storage...

Automakers are increasingly investing in energy storage businesses as demand for EV batteries falters. Ford said in December it plans to convert one factory meant for EV batteries to ...

Ford plans to produce LFP prismatic cells, battery energy storage system modules and 20-foot DC container systems at this facility. These systems are at the heart of the energy storage ...

The company has set a target to deploy at least 20 GWh of battery energy storage systems annually by late 2027, positioning Ford as a meaningful participant in the U.S. energy ...

Ford will repurpose EV battery plants to build grid-scale energy storage, betting on data centers as EV incentives fade.
