By admin March 9, 2025 March 9, 2025 telcomatraining - In the rapidly evolving world of wireless communication, new technologies are emerging to enhance network coverage and efficiency. Among ...

A UAV flying base station integrates the capabilities of a UAV drone (to shift its position) with a base station (to deliver a last-mile hop wireless communication connection to the user ...

This survey article focuses on the different applications and the related algorithms for realizing aerial base stations by thoroughly reviewing each related research area. In a nutshell, this ...

Base stations are one of the widely used components in the field of wireless communication and networks. It is an access point or base point of a particular area for network ...

Considering that one of the goals of the future network generations is to provide ubiquitous communication in the most diverse scenarios to achieve high connection coverage, it is ...

Contextually, we focus on one of the most promising solutions to provide sufficient and reliable coverage in far-flung areas: aerial base stations (ABSs), which consist of unmanned aerial ...

An Aerial base station (ABS), also known as unmanned aerial vehicle (UAV)-mounted base station (BS), is a flying antenna system that works as a hub between the backhaul network and the access ...

Abstract Future mobile communication networks need Unmanned Aerial Vehicles as Base Stations (UAVasBSs) with the fast-moving and long-term hovering capabilities to guarantee ...
