What fish can be kept without a heater?

The Dracula Minnow is another small, cold-water fish that can be kept without a heater, because of their preference for water with room temperatures. They are adaptive and will thrive in water temperatures of between 66 and 79°F or 19 to 26°C. This little fish comes from the small Danionella genus, the species of which lack scales on their bodies.

Can a fish keeper keep subtropical and tropical fish in the same tank?

Experienced fish-keepers can keep both subtropical and tropical fish in the same tank because they have devised ways to create the middle ground in terms of temperature.

What is a good beginner fish?

The Platy Fish is another excellent choice for beginner fish keepers. This species is easy to care for and looks great in virtually any community tank, thanks to its peaceful nature. Platies can live up to 5 years if properly cared for, and most will grow up to 3 inches long.

How do you take care of a fish in a container?

Place one hand under its belly while supporting it with your other hand around its neck area behind its gills. You may place a towel on top of the temporary container to help reduce the light and lessen the stress of the fish. Remove the plants and other decorative objects as well before cleaning. Drain the water from the bowl.

That's awful. One, I don't think most schools like people keeping live animals on school property. Two, I believe those "fish bowls" aren't even designed to successfully keep a fish. I'm ...

Most types of fish will last up to 6 months in the freezer before losing its best qualities. However, fish can last for up to 2 years as far as safety is concerned.

I have kept multiple bettas and this is from my experience. While they may be cool and fun fish, they are far from dogs. They recognize you as the blur that throws in food and nothing more. ...
